SmartConnect
One solution – Zero hassle

Security in the house

With GlobalConnects new Managed Detection & Response Service you can safely leave the protection and monitoring of your network and data to us.

Leave the alerts to us!

560.000. Thats the amount of new pieces of malware discovered every day, so its no wonder that alarms in many companies are blinking and blipping constantly causing alert exhaustion and over time a dangerous indifference and carelessness.

With our new Managed Detection & Response Service we take care of all the alarms for you, identify the culprits and adress the problems accordingly, securing your Network and business critical data so you can use your skills on what you do best.

No Cyber defence perimeter is 100 procent secure. If the accident happens we will be there to fix the problem with our 60 Minute Action Cycle.

Lets show you how...

We Detect malware in 1 Minute

One minute is the time it takes us to detect a threat on your network if your defence perimeter was penetrated. That is often too little time for malware to deploy and to put your network and business critical data at risk.

We Identify in 10 minutes

Ten minutes after a threat has been detected on your network our experts has finished the analyzing process of correlating and comparing the threat against a known set of rules or signatures to identify the malicious malware.

We Mitigate in 60 minutes

One hour is the total time from a breach is detected until we have a mitigation plan ready for you. That means no dwell time for the malware and a very early awareness of how to isolate it and destroy it.

With our new Managed Detection & Response Service, we secure your perimeter and got you fully re(covered) 24/7.

Please note that our new Security Operations Center can be bought both as part of our SmartConnect Suite and as a Standalone Service offering.

We Shoot Dragons

In most companies a breach is discovered when you start seeing the effects of the attack, and by then the damage is already done. With our advanced alert system we can shoot down the malware dragons before they nest and cause damage without disrupting your business.

A Mitigation Plan in 60 minutes

No defence perimeter is 100% safe. With our tried and tested 60 minute Fix-it-Cycle we will detect, identify and mitigate attacks that manage to get through your perimeter defences and into your network.
You can rest assured, we will get you back in business in no time with no data loss.

We play it by the playbook

Our Playbooks are our security field handbooks and we are proud to say that the experience and know-how of our Cyber Security Experts are reflected in our Playbooks. This guarantees high quality and consistency at all times, no matter what hits you.

Recover and Recoperate

Our Security Operations Center is specializing in analyzing odd or suspect behavior across your networks. When you buy a backup and recovery service from our SmartConnect offering we will make sure that your data never gets destroyed or permanently deleted.

SmartConnect Integration

If your perimeter or network defences are set up as part of our SmartConnect offering they can seamlessly integrate into the core of our Security Operations, guaranteeing a smooth and seamless experience in monitoring your resilience and setting up your security posture.

Contact us Anytime

Our analysts are on the job 24/7/365, always ready to tackle anything that could hit you. Also, as a Security Operations Center customer, you're part of a program with a goal to be there for you. Get in touch anytime. No emergency required. It's free and we'd love to help.

SmartConnect's Four Pillars

E — Enabling
P — Protecting
I — Inspecting
C — Connecting
